

HealthConnect FINDINGS

No Show Rate

48.46%

Reminder Effectiveness

4.03%

Appointments with a reminder sent showed a 4.03-point lower no-show rate, a pattern that supports reminder outreach, though it reflects an observed association rather than a controlled test.

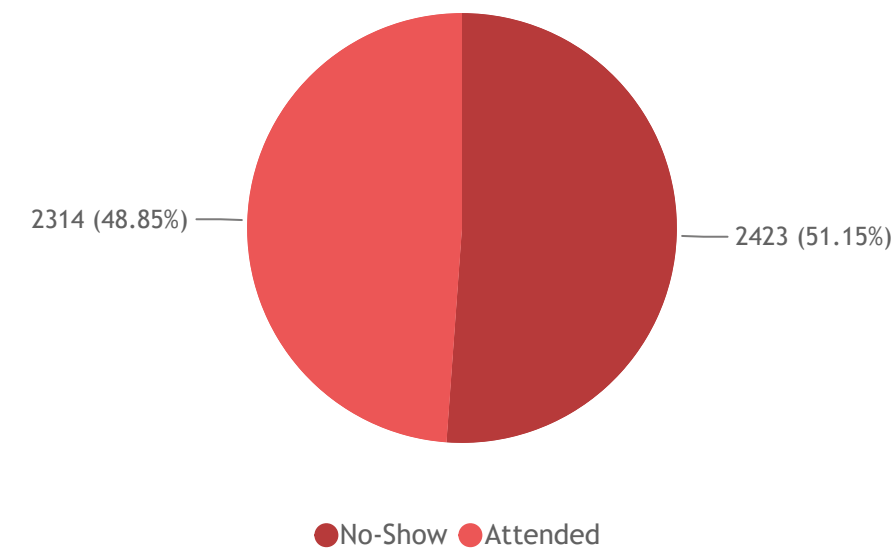

Repeat Offender Concentration

72.43%

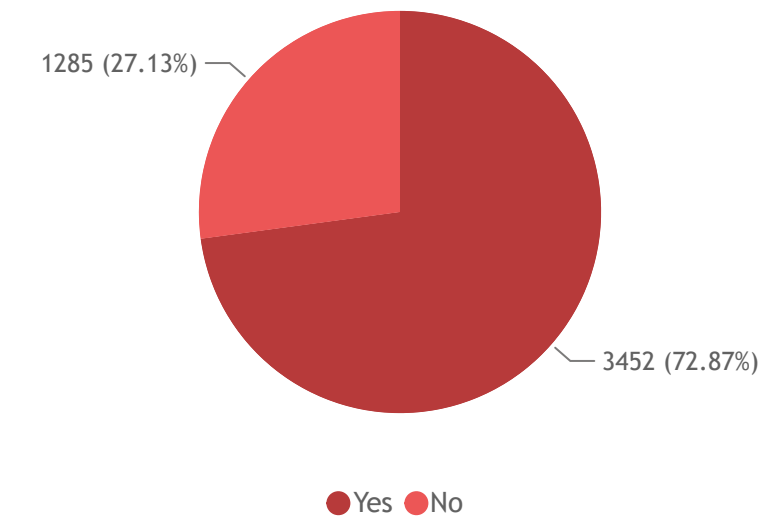

40% of patients (679 of 1,696) have 2+ prior no-shows, and this group accounts for 72.4% of all no-show appointments.

No-shows are concentrated, not evenly spread, which supports a targeted intervention
